DAXDA.IA 90-Day Execution Plan

Repository packet for JumpStart initial intake and regional startup support conversation

Operating logic

The next 90 days should convert an impressive framework into evidence: interviews, pilots, reviewer feedback, workflow artifacts, and capital-ready proof.

90-day milestone map

Window	Theme	Work	Evidence produced
Days 1-15	Company readiness	Finalize naming, one-pager, deck, founder roles, legal formation plan, IP log, and customer-discovery script.	Clean packet; founder narrative; target list; meeting tracker.
Days 16-30	Customer discovery	Run 15-25 interviews with legal, compliance, enterprise software, research, and civic teams.	Interview notes; pattern map; top 3 pain points; pilot criteria.
Days 31-45	Pilot workflow	Define a narrow deidentified review workflow and scoring rubric.	Pilot protocol; audit template; risk scoring rubric; demo examples.
Days 46-60	External validation	Recruit 2-4 outside reviewers/advisors to review process quality and market fit.	Reviewer memo; objections log; revisions list.
Days 61-75	Design-partner pilots	Run 1-3 controlled pilot reviews using deidentified sample outputs.	Before/after audit artifacts; usability feedback; improvement claims limited to observed evidence.
Days 76-90	Capital readiness	Convert evidence into a fundable narrative and program application package.	Updated deck; customer evidence; pilot results; ask; budget; roadmap.

Weekly cadence

- Monday: planning, outreach queue, and JumpStart/advisor follow-ups.
- Tuesday-Wednesday: customer discovery calls and notes.

- Thursday: product workflow and audit template refinement.
- Friday: evidence review, founder meeting, next-week plan, and follow-up emails.
- Weekend: documentation cleanup only; no strategic panic builds.

Key performance indicators

- 20-40 target accounts identified.
- 15-25 customer discovery conversations completed.
- 2-4 reviewers/advisors engaged.
- 1-3 deidentified design-partner pilots scoped or completed.
- One repeatable audit template and scoring rubric.
- One revised deck with evidence, not just theory.

Risks to control

- Overclaiming maturity before proof exists.
- Explaining recursion mechanics before the buyer understands the business problem.
- Pursuing too many verticals at once.
- Skipping customer discovery and trying to sell too early.
- Using private receipts in external conversations before they are organized and relevant.
