DAXDA.IA Clean Ask for JumpStart

Repository packet for JumpStart initial intake and regional startup support conversation

Meeting goal

Use the meeting to determine the best JumpStart or regional pathway for DAXDA.IA: tech startup services, software accelerator fit, customer discovery support, advisor introductions, non-dilutive funding routes, and capital-readiness milestones.

Primary ask

We are seeking JumpStart guidance on converting DAXDA.IA from a structured AI-governance framework into a validated, pilot-ready software workflow. Specifically, we need help with customer discovery, pilot design, advisor introductions, accelerator/program fit, and funding-readiness milestones.

Specific requests

1. Assess whether DAXDA.IA fits JumpStart tech startup services, the software accelerator pathway, small business support, or a referral network.
2. Identify the strongest first customer segment and what evidence is needed before outreach becomes a serious pilot discussion.
3. Recommend 2-5 regional advisors or operators with experience in enterprise software, AI governance, compliance, legal tech, or SaaS go-to-market.
4. Clarify whether there are relevant non-dilutive grants, regional programs, or investor-readiness milestones.
5. Tell us what would make DAXDA.IA credible enough for a design-partner pilot in the next 60-90 days.

Questions to ask Evan

- Where does this fit best inside JumpStart: tech startup services, software accelerator, advisor network, or another regional pathway?
- What are the three proof points you would want before recommending us to a pilot customer or investor-facing program?
- Which market wedge sounds strongest: legal/compliance, enterprise software, research validation, civic AI governance, or professional services?
- What should we not spend time on yet?
- Who should we speak with next after this call?

One-minute meeting opener

Thank you for meeting with me. DAXDA.IA is an early-stage AI-governance and decision-audit framework. It is designed to help organizations challenge and document AI-assisted outputs before relying on them in consequential workflows. We have the framework, early materials, and a clear pilot concept. What we need now is the right product-validation path: customer discovery, design-partner pilots, advisor feedback, and guidance on the strongest JumpStart or regional funding-readiness route.

Source notes

Used to align this packet to JumpStart's public language. Verify program fit with Evan during the meeting because program availability and eligibility can change.
