DAXDA.IA Stackstone Company Brief

Forwardable one-page summary for JumpStart intake and design-partner conversations

Field	Packet entry
Company	DAXDA.IA / internal framework: DAXDA
Founders	Nicole Bess, founder and lead architect; Alexander Tyski, strategic partner/co-founder. Verify legal spellings before sending externally.
Category	AI governance, decision audit, enterprise risk review, human-in-the-loop AI evaluation.
Problem	Organizations are adopting AI without a repeatable way to challenge, document, and govern reliance decisions.
Solution	A structured review workflow that turns AI-assisted outputs into audit records: assumptions, evidence gaps, contradictions, uncertainty, escalation needs, and disposition.
Early users	Legal/compliance teams, professional-service firms, research groups, civic innovation offices, and enterprise software teams.
Current stage	Framework and documentation stage with prototype/pilot workflow being packaged for external review and design-partner conversations.
90-day goal	Customer discovery, deidentified pilot reviews, outside reviewer feedback, refined product workflow, and capital-ready materials.
JumpStart ask	Guidance on customer discovery, pilot design, advisor introductions, accelerator fit, and funding-readiness path.

Short description

DAXDA.IA helps organizations challenge and document AI-assisted outputs before those outputs influence important decisions. It is designed to improve review consistency, expose hidden assumptions, and create a clearer audit trail for human reviewers.

Initial design-partner ask

Seeking narrowly scoped, non-production design-partner conversations using deidentified examples to test whether the process improves risk visibility, review quality, and documentation clarity.
