# DAXDA COMMUNITY IMPACT & OUTREACH FUND LEAD AGREEMENT

*Expanded Operating Draft v0.2 - Nathan Roby Role*

**Prepared for: DAXDA / Nicole Bess**
Role Candidate: Nathan Roby
Draft date: June 10, 2026

**Important draft note:** This document is an operating and governance draft, not legal advice. Before signature, DAXDA should have a licensed attorney review entity formation, equity language, tax treatment, compensation, charitable reserve structure, fiduciary duties, and enforceability in the applicable jurisdiction.

## Document Control

| | |
|---|---|
| **Document name** | DAXDA Community Impact & Outreach Fund Lead Agreement |
| **Version** | v0.2 Expanded Draft |
| **Purpose** | Define Nathan Roby's role as lead for the 7% Community Impact / Outreach / Social Impact Reserve lane. |
| **Primary protection** | The 7% reserve is not personal equity, personal cash, or unilateral spending authority. |
| **Signing posture** | Operational draft for attorney review before execution. |
| **Claim boundary** | No claim of DAXDA validation, certification, institutional endorsement, legal compliance certification, or AGI capability without written approval. |

### 1. Parties

This Community Impact & Outreach Fund Lead Agreement (the "Agreement") is entered into by and between DAXDA / Nicole Bess ("Company," "DAXDA," or "Founder") and Nathan Roby ("Community Impact Lead," "Lead," or "Nathan"). The parties may later replace this draft with a formal operating agreement, contractor agreement, employment agreement, advisor agreement, or board-approved appointment if DAXDA forms or restructures as a legal entity.

For this draft, DAXDA refers to the developing company/project currently known as DAXDA, including its AI governance, decision-firewall, validation, outreach, community impact, social-impact, and related operating activities. This Agreement does not create institutional validation, investor approval, securities rights, charitable exemption, employment status, or tax classification by itself.

### 2. Role Title and Appointment

Nathan Roby is appointed as Community Impact & Outreach Fund Lead for the DAXDA 7% Community Impact / Outreach / Social Impact Reserve lane. This is a defined operating role. It is not a general officer role, not a co-founder designation, not a board seat, not a voting equity grant, and not authority to control DAXDA funds or bind DAXDA to contracts.

The role exists so DAXDA has a designated person responsible for organizing community-facing outreach, ethical impact relationships, local community programming, public-benefit partnerships, and proposed uses of the 7% reserve. The Lead operates under Founder oversight, written approvals, reporting requirements, and claim-boundary rules.

## 3. Background and Intent

DAXDA's intended cap-table and reserve concept includes a 7% charity / community impact / social impact lane. The purpose of this lane is to preserve a defined part of the project for public-facing benefit, outreach, education, community programming, and social-impact work connected to responsible AI, AI governance, AI literacy, and community protection from high-risk automated decision workflows.

The parties intend Nathan's role to help structure that lane professionally before money, attention, partnership opportunities, or community claims create confusion. The operating principle is simple: the 7% lane should be stewarded with transparency, reporting, and governance discipline. It should not become an informal cash drawer, a personal ownership claim, or an uncontrolled promise-making vehicle.

## 4. Core Role Definition

**4.1 Community impact strategy.** Develop the initial outreach strategy for the 7% community impact reserve, including suggested community groups, nonprofit partners, public-interest AI education opportunities, and responsible-AI literacy events.

**4.2 Outreach coordination.** Help identify and coordinate communications with community partners, local organizations, educational groups, social-impact groups, and potential beneficiaries.

**4.3 Fund-use recommendations.** Prepare written recommendations for possible uses of the 7% reserve, but only the Founder or authorized DAXDA governance body may approve actual spending or commitments.

**4.4 Community trust function.** Help DAXDA maintain a credible community-facing posture: practical, transparent, non-exploitative, and not inflated by unverified claims.

**4.5 Reporting function.** Maintain records of outreach, contacts, proposed projects, meetings, feedback, risks, and follow-up items.

## 5. What the 7% Reserve Means

The 7% Community Impact / Outreach / Social Impact Reserve is a planned DAXDA lane reserved for public-benefit, community, outreach, education, and social-impact purposes. Unless a later executed company agreement says otherwise, the 7% reserve is not owned by Nathan personally.

Nathan's role is to lead planning, outreach, reporting, and recommendations for this lane. He does not receive personal ownership of the 7% reserve by being appointed to this role. He does not have unilateral authority to spend the reserve, assign it, pledge it, transfer it, sell it, borrow against it, redirect it, accept money into it, or represent it as his own.

## 6. Authority Limits

Nathan may speak about DAXDA only within the limits approved in writing by the Founder. He may introduce the concept, identify potential partners, organize community outreach, collect feedback, and propose next steps. He may not sign contracts, accept funds, negotiate investment terms, promise equity, promise grants, promise donations, make public claims of validation, bind DAXDA to any obligation, or represent that he controls DAXDA's finances.

Any commitment involving money, equity, title, partnership status, public endorsement, data-sharing, legal responsibility, confidential access, or third-party obligations must be approved in writing by the Founder before Nathan communicates it as approved.

## 7. Express Prohibited Actions

- Nathan may not claim that the 7% reserve belongs to him personally.
- Nathan may not accept money, donations, grants, sponsorships, investor funds, checks, cash, crypto, or reimbursements in DAXDA's name without written approval.
- Nathan may not direct any DAXDA-related funds into a personal account.
- Nathan may not create a bank account, wallet, payment link, crowdfunding page, donor page, or fiscal sponsorship page for DAXDA without written approval.
- Nathan may not promise that DAXDA will donate money, provide services, or fund a community organization unless approved in writing.
- Nathan may not describe DAXDA as institutionally validated, certified, legally approved, clinically validated, government approved, BlueDot endorsed, or AGI.

- Nathan may not disclose DAXDA source code, full prompt architecture, DA-X internals, confidential strategy, private data, internal tests, or cloneable operational details.
- Nathan may not speak to press, publish official claims, create public-facing fundraising materials, or announce partnerships without written approval.
- Nathan may not use DAXDA branding, logos, screenshots, reports, or documents in a way that implies approval beyond the written scope provided.

## 8. Permitted Activities

- Build a community outreach map identifying organizations, schools, nonprofits, neighborhood groups, civic groups, AI literacy groups, and public-interest technology groups that may benefit from DAXDA-related education or future support.
- Prepare a list of potential community partners and categorize them as education, AI literacy, civic technology, youth development, workforce, public safety, responsible AI, or community protection.
- Draft outreach messages for Founder approval.
- Collect community feedback and summarize it for DAXDA leadership.
- Propose small community pilots, workshops, listening sessions, or educational sessions.
- Help explain DAXDA in plain language using approved wording.
- Track contacts, conversations, referrals, risks, and follow-ups in a shared tracker.
- Prepare weekly updates and monthly community impact summaries.

## 9. Approved DAXDA Description for Nathan

Nathan may use the following description unless DAXDA gives updated written language:

"DAXDA is an AI governance decision-firewall that helps organizations inspect AI-generated outputs before acting on them. It is designed to surface unsupported claims, hidden assumptions, contradictions, weak evidence, risk severity, falsification gaps, and human-review triggers. DAXDA does not replace human judgment. It helps make AI-assisted reasoning more inspectable before decisions are made."

Nathan should not add claims beyond this description unless approved in writing.

## 10. Community-Facing Description

For community audiences, Nathan may use this simpler version:

"DAXDA is being developed to help people and organizations slow down risky AI decisions. It checks whether an AI answer is making claims that are unsupported, hiding assumptions, contradicting itself, or creating risks that should go to a human before anyone acts. The community impact lane is meant to make sure this work does not only serve companies, but also supports education, outreach, and public benefit."

This version is intentionally plain. No jargon parade. No moon landing claims. The goal is trust.

## 11. Role Objectives for First 30 Days

- Create a list of at least 25 community and outreach prospects connected to AI literacy, public interest technology, education, civic impact, youth development, workforce support, nonprofit partnerships, or community protection.
- Rank the top 10 prospects by strategic fit, urgency, trust potential, and ease of first conversation.
- Draft at least 3 outreach scripts: one for community organizations, one for educational partners, and one for nonprofit or civic partners.
- Create a proposed 90-day community impact roadmap with low-cost, no-overclaim actions.
- Create a risk register identifying partnership, public-claim, money-handling, reputational, and confidentiality risks.
- Prepare a weekly reporting template for the Founder.

## 12. Role Objectives for First 90 Days

- Develop a community impact strategy tied to DAXDA's AI governance mission.
- Identify at least 3 possible community education or listening-session pilots.
- Identify possible nonprofit, civic, educational, or public-interest partners.
- Prepare a recommended policy for future use of the 7% reserve.
- Create a basic community feedback loop so DAXDA can learn how AI governance concerns appear outside enterprise and academic circles.

- Create a community impact one-pager for Founder review.
- Recommend whether Nathan's role should continue, expand, narrow, or be replaced by a formal committee or advisory structure.

## 13. Reporting Requirements

Nathan must provide a weekly written update unless the Founder waives that requirement. The update should be short, factual, and organized.

Each weekly update should include: completed outreach, people contacted, responses received, meetings scheduled, risks identified, community needs heard, proposed next steps, requests for approval, and any money-related or claim-related issue that requires Founder review.

If Nathan has no activity to report, he should report "no activity" rather than disappear into the fog. Silence is not a reporting strategy.

## 14. Weekly Report Template

Nathan should use the following template unless DAXDA provides a replacement:

| Report Field | Nathan Response |
|---|---|
| **Week covered** | |
| **Outreach completed** | |
| **New contacts added** | |
| **Meetings or calls held** | |
| **Community feedback heard** | |
| **Risks or concerns** | |
| **Approvals needed** | |
| **Proposed next steps** | |
| **Money/fund issues** | |
| **Public-claim issues** | |
| **Confidentiality issues** | |

## 15. Fund Governance Rules

No fund use is approved merely because it appears aligned with community impact. Every proposed use of the 7% reserve must be documented, reviewed, and approved through DAXDA's authorized process. Until DAXDA creates a formal entity, board, foundation, fiscal sponsor, or reserve account, the 7% lane should be treated as a planned governance allocation, not a spendable independent fund.

A proposed use of the reserve should include: purpose, recipient, amount, timeline, expected community benefit, risks, reporting plan, conflict-of-interest check, and whether the payment creates tax, legal, charitable, securities, employment, or donor obligations.

## 16. Spending Approval Levels

The following draft approval table applies unless replaced by a formal policy:

| Action | Nathan Authority | Founder Approval | Notes |
|---|---|---|---|
| Identify potential partner | May do | Not required unless public- | Use approved language. |

| | | | |
|---|---|---|---|
| | | facing | |
| Send outreach email | Draft only unless pre-approved | Required before official send | No validation claims. |
| Schedule intro call | May do if no commitments made | Notify Founder | Use approved description. |
| Promise donation/grant/service | No | Required in writing | Never promise from personal authority. |
| Accept funds or payment | No | Required in writing | No personal accounts. |
| Sign agreement/MOU | No | Required in writing | Attorney review may be required. |
| Use DAXDA brand publicly | No unless approved | Required in writing | Keep claims controlled. |
| Speak to press/media | No | Required in writing | Founder-approved only. |

## 17. Compensation

This draft does not automatically grant salary, equity, commission, or personal ownership of the 7% reserve. Any compensation must be separately approved in writing.

Possible compensation structures may include one or more of the following if later approved: volunteer role, contractor stipend, milestone-based consulting payment, advisor grant, community-outreach stipend, success fee for approved partnerships, or formal employment. Nothing in this Agreement promises any of those structures unless an executed compensation addendum is attached.

If compensation is later approved, the compensation addendum should define amount, payment timing, deliverables, tax classification, reimbursement rules, expense pre-approval requirements, and whether any role is at-will or project-based.

## 18. No Personal Equity Grant

Nathan's appointment as Community Impact & Outreach Fund Lead does not grant him founder equity, common stock, membership interests, options, tokens, revenue share, governance rights, voting rights, transfer rights, or ownership of DAXDA intellectual property.

If DAXDA later chooses to grant compensation, equity, advisory shares, tokens, or other rights, that must be done through a separate written agreement reviewed for securities, tax, corporate, and employment implications.

## 19. Expenses and Reimbursement

Nathan may not incur reimbursable expenses without prior written approval. If an expense is approved, Nathan must provide receipts, purpose, date, payee, and relation to approved outreach activity. Unapproved expenses are Nathan's responsibility.

Examples of expenses requiring written approval include travel, meals, event fees, software tools, printing, paid ads, domain names, venue deposits, gift cards, donations, sponsorships, consultant fees, and community-event costs.

## 20. Conflict of Interest

Nathan must disclose any conflict of interest before recommending a partner, recipient, vendor, event, contractor, nonprofit, community group, or payment. A conflict includes personal relationships, family relationships, employment relationships, financial interests, expected benefits, side deals, referral fees, or reputational interests.

A disclosed conflict does not automatically disqualify a recommendation. Hiding the conflict does.

## 21. Confidentiality

Nathan may receive confidential information about DAXDA, including strategy, outreach targets, grant materials, internal tests, product positioning, technical descriptions, business plans, partnership discussions, documents, drafts,

contacts, and private communications. Nathan must protect that information and may not disclose it without written approval.

Confidential information includes anything that a reasonable person would understand to be private, sensitive, proprietary, strategic, unreleased, or not intended for public distribution.

## 22. Intellectual Property

All DAXDA intellectual property, including system concepts, names, documents, frameworks, protocols, brand assets, outreach strategy, work product created for DAXDA, community impact plans, reports, templates, and derivative materials created within the role, belongs to DAXDA unless a separate written agreement states otherwise.

Nathan may not reuse DAXDA confidential materials, templates, strategy, brand identity, community lists, reviewer lists, grant language, or internal documents for a competing project without written approval.

## 23. Non-Circumvention

Nathan may not use DAXDA introductions, prospects, partners, funders, community contacts, reviewer contacts, strategic leads, or confidential relationship maps to bypass DAXDA, compete with DAXDA, redirect opportunities away from DAXDA, or personally capture opportunities created through DAXDA activity.

This does not prevent Nathan from maintaining ordinary personal or professional relationships outside DAXDA. It does prevent side-door capture of DAXDA opportunities. Cute loopholes are still loopholes.

## 24. Public Communications and Claim Boundaries

Nathan must use approved language when describing DAXDA. He may not exaggerate validation status, technical maturity, institutional involvement, grant status, investor interest, legal readiness, healthcare readiness, government approval, BlueDot status, or AI capability.

Nathan may say DAXDA is built and internally tested if approved. Nathan may say DAXDA is seeking independent methods review if true. Nathan may not say DAXDA is fully validated, university validated, clinically validated, legally certified, government certified, endorsed by a funder, or an AGI system unless DAXDA has written proof and written approval to use that language.

## 25. Community Ethics Rules

- Do not exploit vulnerable people, nonprofits, students, or community groups for credibility.
- Do not promise funds before funds exist and approvals are documented.
- Do not imply DAXDA will solve every AI harm.
- Do not collect sensitive personal data unless DAXDA has an approved data-handling plan.
- Do not use community stories publicly without permission.
- Do not make communities perform free credibility labor for DAXDA.
- Do not confuse outreach with extraction. The community lane exists to create reciprocal benefit.

## 26. Data Handling

Nathan may collect basic outreach information such as organization name, contact name, role, public email, meeting notes, general feedback, and follow-up status. Nathan should not collect sensitive personal information, health information, legal information, immigration information, minors' information, trauma stories, financial details, or private institutional data unless DAXDA has approved a specific data-handling process.

All outreach trackers and notes must be stored in a location approved by DAXDA. Personal devices and informal text threads should not become the official record system.

## 27. Deliverables

Nathan's initial deliverables should include the following:

| Deliverable | Due Target | Required Contents | Acceptance Standard |
|---|---|---|---|
| Community prospect map | Day 7 | 25 prospects with category, contact route, fit, risk, next | Usable tracker, not vibes. |

| | | | |
|---|---|---|---|
| | | step | |
| Top 10 partner shortlist | Day 10 | Ranked list with rationale and outreach angle | Clear enough for Founder review. |
| Outreach scripts | Day 14 | Community, nonprofit, education/civic versions | Uses approved claim language. |
| Risk register | Day 21 | Money, claim, privacy, reputation, conflict risks | Specific mitigations included. |
| 90-day roadmap | Day 30 | Low-cost pilots, listening sessions, partner path | Practical, fund-safe, no overclaims. |

## 28. Performance Standards

- Accuracy over hype.
- Written records over memory.
- Approved language over improvisation.
- Community benefit over optics.
- No money movement without approval.
- No validation claims without proof.
- No private disclosures without permission.
- No partnerships announced before agreement.

## 29. Term

This Agreement begins on the effective date signed below and continues for an initial pilot term of 90 days unless terminated earlier. After 90 days, DAXDA may renew, revise, narrow, expand, or end the role.

If no formal renewal occurs, the role should be treated as inactive until DAXDA gives written continuation approval.

## 30. Termination

DAXDA may terminate this role at any time if Nathan violates authority limits, confidentiality, money-handling rules, public-claim boundaries, community ethics rules, or reporting requirements. DAXDA may also terminate the role if the company changes direction, forms a formal entity, restructures governance, appoints a committee, lacks funding, or determines that the role is no longer needed.

Nathan may resign by written notice. Upon termination or resignation, Nathan must return or delete confidential information as instructed, stop representing himself as DAXDA Community Impact Lead, stop using DAXDA materials, and provide a final handoff report.

## 31. Handoff Duties

- Return or transfer all outreach trackers, notes, partner lists, draft scripts, meeting notes, and contact records.
- Identify open conversations and pending commitments.
- Identify any unresolved money, claim, confidentiality, or community-risk issues.
- Stop using DAXDA title, logos, materials, and descriptions unless separately authorized.
- Confirm that no DAXDA-related funds, accounts, payment links, or donor channels are under personal control.

## 32. Independent Contractor / Role Status

Unless a separate employment agreement is signed, Nathan is not an employee of DAXDA. Nothing in this Agreement creates payroll status, benefits, tax withholding, unemployment insurance, workers compensation coverage, or employment rights. If compensation is later added, the parties should define tax classification in writing.

This clause is included as a draft operating control. It should be reviewed by counsel because worker classification rules can be fact-specific.

### 33. No Partnership or Agency

Nathan is not a legal partner, general agent, officer, director, managing member, or authorized representative of DAXDA except to the narrow extent expressly approved in writing. Nathan may not bind DAXDA to legal, financial, charitable, operational, employment, or partnership obligations.

### 34. Dispute Handling

If a dispute arises, the parties should first attempt a written resolution process: identify the issue, identify the relevant clause, propose a fix, and hold one good-faith meeting or call. If the issue involves funds, confidential information, public claims, misuse of DAXDA identity, or third-party obligations, DAXDA may require immediate pause of Nathan's activities while the issue is reviewed.

This draft does not select litigation venue, governing law, arbitration rules, or mediation rules. Those should be added by counsel before formal execution.

### 35. Amendments

Any amendment must be in writing and approved by the Founder or authorized DAXDA governance body. Text messages, casual conversations, verbal approvals, or assumptions do not amend this Agreement unless expressly confirmed in a written amendment.

### 36. Entire Draft Understanding

This document reflects the draft operating understanding for Nathan's role as Community Impact & Outreach Fund Lead. It replaces informal statements about Nathan controlling or owning the 7% community impact reserve unless a later signed agreement says otherwise.

### 37. Signature Blocks

The parties may sign below after attorney review and final approval.

| **DAXDA / Founder** | **Nathan Roby** |
|---|---|
| Signature: _____ | Signature: _____ |
| Name: Nicole Bess | Name: Nathan Roby |
| Date: _____ | Date: _____ |

## Appendix A - Approved Outreach Script

Hi [Name],

My name is Nathan Roby, and I am assisting DAXDA with its community impact and outreach lane. DAXDA is an AI governance decision-firewall being developed to help organizations inspect AI-generated outputs before acting on them.

We are not asking for endorsement or making claims of institutional validation. We are exploring community-facing education, responsible AI outreach, and possible future public-benefit partnerships connected to AI literacy and AI decision-risk awareness.

Would you be open to a short introductory conversation about how AI decision-risk shows up in your community, organization, or work?

Best,
Nathan Roby
Community Impact & Outreach Fund Lead, DAXDA
[Contact information]

## Appendix B - Claim Boundary Card

- Say: DAXDA is built and internally tested. Do not say: DAXDA is fully validated.

- Say: DAXDA is seeking independent methods review. Do not say: A university validated DAXDA.
- Say: DAXDA is an AI-output decision-firewall. Do not say: DAXDA is an AGI system.
- Say: DAXDA helps make AI reasoning inspectable. Do not say: DAXDA guarantees AI safety.
- Say: The 7% lane is a planned community impact reserve. Do not say: Nathan owns 7% personally.
- Say: Proposed fund uses require approval. Do not say: Nathan can allocate money independently.

## Appendix C - Community Impact Reserve Proposal Form

Nathan should use this form before recommending any use of the 7% reserve.

| Field | Response |
|---|---|
| **Proposal title** | |
| **Proposed partner/recipient** | |
| **Community need** | |
| **Requested amount or support** | |
| **Expected benefit** | |
| **Timeline** | |
| **Risks** | |
| **Conflict-of-interest check** | |
| **Data/privacy issues** | |
| **Public-claim risk** | |
| **Reporting plan** | |
| **Founder approval status** | |
